IT 607 ASSIGNMENT 2

WILSON CHANHEMO, NOEL CHINTELELE, SAID A. KOMBO, NOEL CHINTELELE
University of Dodoma

I. Assignment 2.1

Use the outage probability expressions derived in class to plot the outage probability versus SNR for Selective Combining, and Maximum Ratio Combining, diversity techniques. Pick a fixed value for the threshold SNR, These expressions are also available in the book by Goldsmith. Plot for the number of diversity branches M = 1; 2; 4; 8; and 12, and SNR in the range 0 to 30dB in steps of 5dB. Comment on the diversity and array gains as M increases.

II. SELECTION COMBINING TECHNIQUE

For Selection Combining technique, the formula for outage probability is given in figure 1

Matlab Code

```
snrdB=0:0.5:30;
h = (randn(1, 10000) + 1i * randn(1, 10000)) / \sqrt{(2)};
sigmaz=1;
snr = 10.(snrdB/10);
P = (sigmaz^2) * snr./(mean(abs(h).^2));
snrm = mean(abs(h).^2). *P/(sigmaz^2);
x = 10;
M1 = 1;
M2 = 2;
M3 = 4;
M4 = 8;
M5 = 12;
Pout1 = (1 - exp(-x./snrm)).^{M}1;
Pout2 = (1 - exp(-x./snrm)).^{M}2;
Pout3 = (1 - exp(-x./snrm)).^{M}3;
Pout4 = (1 - exp(-x./snrm)).^{M}4;
Pout5 = (1 - exp(-x./sn_m)).^{M}5;
plot(snrdB, Pout1,'blue'); hold on;
plot(snrdB, Pout2, 'black'); hold on;
plot(snrdB, Pout3,'green'); hold on;
plot(snrdB, Pout4,'red'); hold on;
plot(snrdB, Pout5,'yellow');
```

$$P_o(\gamma_o) = \prod_{i}^{M} [p(\gamma_i < \gamma_o)] = \prod_{i}^{M} [1 - e^{\frac{\gamma_o}{\overline{\gamma_i}}})]$$

Figure 1: Equation

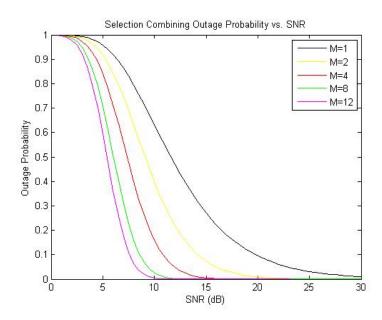

Figure 2: Outage Probability in Selection Combining

 $legend('M=1','M=2','M=4','M=8','M=12'); \ title('Outage\ Probability\ vs.\ SNR'); \ xlabel('SNR\ (dB)'); \ ylabel('Outage\ Probability');$

III. MAXIMAL RATIO COMBINING

formular for outage probability for Maximal ratio combining is shown in Figure 3 Matlab Code

```
snrdB=0:0.5:30;

h = (randn(1, 10000) + 1i * randn(1, 10000)) / \sqrt{2};

sigmaz = 1;

snr = 10.(snrdB/10);

P = (sigma_z^2) * snr./(mean(abs(h).^2));

snr_m = mean(abs(h).^2). * P/(sigma_z^2);

x = 10;

a = -x./snr_m;

b = x./snr_m;
```

```
sum_a ll 1 = 0;
   fork = 1:1
   sum_a ll1 = sum_a ll1 + ((b.(k-1))/prod(1:(k-1)));
   P_o ut1 = 1 - (exp(a). * sum_a ll1);
   sum_a ll 2 = 0;
   fork = 1:2
   sum_a ll2 = sum_a ll2 + ((b.(k-1))/prod(1:(k-1)));
   end
   P_out2 = 1 - (exp(a). * sum_all2);
   sum_a ll 3 = 0;
   fork = 1:4
   sum_a ll3 = sum_a ll3 + ((b.(k-1))/prod(1:(k-1))); end
   P_out3 = 1 - (exp(a). * sum_all3);
   sum_a ll 4 = 0;
   fork = 1:8
   sum_a ll4 = sum_a ll4 + ((b.(k-1))/prod(1:(k-1)));
   end
   P_out4 = 1 - (exp(a). * sum_all4);
   sum_a ll 5 = 0;
   fork = 1:12
   sum_a ll5 = sum_a ll5 + ((b.(k-1))/prod(1:(k-1)));
   end
   P_o ut5 = 1 - (exp(a). * sum_a ll5);
   plot(snrdB, Pout1,' blue'); holdon;
   plot(snrdB, Pout2,' black'); holdon;
   plot(snrdB, Pout3,' green'); holdon;
   plot(snrdB, Pout4,' red'); holdon;
   plot(snrdB, P_out5, 'yellow');
   legend('M = 1', 'M = 2', 'M = 4', 'M = 8', 'M = 12');
title('OutageProbabilityvs.SNR');
xlabel('SNR(dB)');
ylabel('OutageProbability');
```

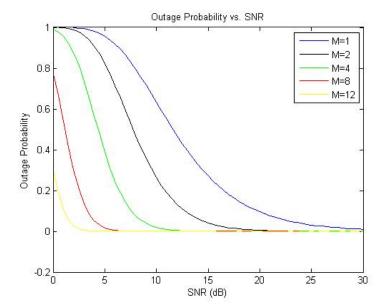

Figure 3:

$$P_{out} = p(\gamma_{\Sigma} < \gamma_0) = \int_0^{\gamma_0} p_{\gamma_{\Sigma}}(\gamma) d\gamma = 1 - e^{-\gamma_0/\overline{\gamma}} \sum_{k=1}^M \frac{(\gamma_0/\overline{\gamma})^{k-1}}{(k-1)!}.$$

Figure 4:

IV. Assignment 2.2

Use simulation to plot the bit error probability versus SNR for Selective Combining, Maximum Ratio Combining, and Equal Gain Combining diversity techniques using QPSK modulation. The simulation system is shown in the

figure below, assuming a block fading channel model with block length N as a parameter of choice. You should generate enough random input bits bk and the corresponding channel realizations to obtain a smooth error probability plot. Perform the simulation for the number of diversity branches M=1; 2; 4 and 8, and for SNR in the range 0 to 20dB in steps of 5dB. Simlation Diagram

V. Selection Combining

Bit error rate is calculated by the formular

```
Matlab Code
clear N = 10^6;
          ip = rand(1, N) > 0.5; s = 2 * ip - 1;
          nRx = [12345678]; Eb_N 0_d B = [0:20];
          forjj = 1 : length(nRx)
          forii = 1 : length(Eb_N 0_d B)
          n = 1/sqrt(2) * [randn(nRx(jj), N) + j * randn(nRx(jj), N)]; h = 1/sqrt(2) * [randn(nRx(jj), N) + j * randn(nRx(jj), N)]; h = 1/sqrt(2) * [randn(nRx(jj), N) + j * randn(nRx(jj), N)]; h = 1/sqrt(2) * [randn(nRx(jj), N) + j * randn(nRx(jj), N)]; h = 1/sqrt(2) * [randn(nRx(jj), N) + j * randn(nRx(jj), N)]; h = 1/sqrt(2) * [randn(nRx(jj), N) + j * randn(nRx(jj), N)]; h = 1/sqrt(2) * [randn(nRx(jj), N) + j * randn(nRx(jj), N)]; h = 1/sqrt(2) * [randn(nRx(jj), N) + j * randn(nRx(jj), N)]; h = 1/sqrt(2) * [randn(nRx(jj), N) + j * randn(nRx(jj), N)]; h = 1/sqrt(2) * [randn(nRx(jj), N) + j * randn(nRx(jj), N)]; h = 1/sqrt(2) * [randn(nRx(jj), N) + j * randn(nRx(jj), N)]; h = 1/sqrt(2) * [randn(nRx(jj), N) + j * randn(nRx(jj), N)]; h = 1/sqrt(2) * [randn(nRx(jj), N) + j * randn(nRx(jj), N)]; h = 1/sqrt(2) * [randn(nRx(jj), N) + j * randn(nRx(jj), N)]; h = 1/sqrt(2) * [randn(nRx(jj), N) + j * randn(nRx(jj), N)]; h = 1/sqrt(2) * [randn(nRx(jj), N) + j * randn(nRx(jj), N)]; h = 1/sqrt(2) * [randn(nRx(jj), N) + j * randn(nRx(jj), N)]; h = 1/sqrt(2) * [randn(nRx(jj), N) + j * randn(nRx(jj), N)]; h = 1/sqrt(2) * [randn(nRx(jj), N) + j * randn(nRx(jj), N)]; h = 1/sqrt(2) * [randn(nRx(jj), N) + j * randn(nRx(jj), N)]; h = 1/sqrt(2) * [randn(nRx(jj), N) + j * randn(nRx(jj), N)]; h = 1/sqrt(2) * [randn(nRx(jj), N) + j * randn(nRx(jj), N)]; h = 1/sqrt(2) * [randn(nRx(jj), N) + j * randn(nRx(jj), N)]; h = 1/sqrt(2) * [randn(nRx(jj), N) + j * randn(nRx(jj), N)]; h = 1/sqrt(2) * [randn(nRx(jj), N) + j * randn(nRx(jj), N)]; h = 1/sqrt(2) * [randn(nRx(jj), N) + j * randn(nRx(jj), N)]; h = 1/sqrt(2) * [randn(nRx(jj), N) + j * randn(nRx(jj), N)]; h = 1/sqrt(2) * [randn(nRx(jj), N) + j * randn(nRx(jj), N)]; h = 1/sqrt(2) * [randn(nRx(jj), N) + j * randn(nRx(jj), N)]; h = 1/sqrt(2) * [randn(nRx(jj), N) + j * randn(nRx(jj), N)]; h = 1/sqrt(2) * [randn(nRx(jj), N) + j * randn(nRx(jj), N)]; h = 1/sqrt(2) * [randn(nRx(jj), N) + j * randn(nRx(jj), N)]; h = 1/sqrt(2) * [randn(nRx(jj), N) + j * randn(nRx(jj), N)]; h = 1/sqrt(2) * [randn(nRx(jj),

Simulation results

VIII. CONCLUSION

Simulation shows that the outage probability for Selection and Maximal ratio combining generarry decreases as number of branches increase

For Selection combining, the outage probability drop rapidly as SNR increases

The bit error probabilities for Selection Combining, Maximal ration and equal gain are more less as compared to the outage probabilities for same cases

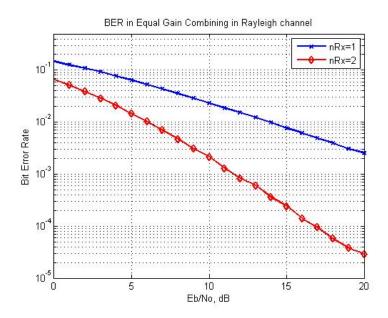

Figure 8:
